SRN: PES1UG24CS906

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall allow guests to select an available interview time slot and submit structured bullet points for discussion topics with biography links.	High	Pass: Guest selects an available slot and successfully submits discussion topics and biography links, and the information is saved to the episode. Fail: Guest can book an unavailable slot or the submitted information is not saved.	This is the core functionality for scheduling a guest and collecting preparation material.
FR-002	Functional	The system shall allow the show host to create, modify, and block interview time slots.	High	Pass: Host can create, modify, or block a time slot, and the updated availability is immediately reflected to guests. Fail: Guests can select a slot that the host has blocked.	Allows the host to control the podcast schedule and prevent booking conflicts.
FR-003	Functional	The system shall allow the show host to view submitted	High	Pass: Host can open a scheduled episode and view all	Allows the host to prepare appropriately

		guest discussion topics and biography links for a scheduled episode.		discussion topics and biography links submitted by its guest. Fail: Any submitted information is missing or inaccessible.	for the interview.
FR-004	Functional	The system shall generate a formatted, timestamped run-of-show production sheet using the episode schedule and submitted guest topics.	High	Pass: The generated production sheet contains the episode schedule, timestamps, and submitted discussion topics. Fail: The sheet is generated without any required information.	Provides the host with a structured production plan for recording the episode.
FR-005	Functional	The system shall send a booking confirmation and calendar invitation to the guest after an interview slot is successfully booked.	High	Pass: A confirmation and calendar invitation containing the correct interview date and time are sent after booking. Fail: No confirmation is sent or the invitation contains incorrect booking information.	Ensures the guest is informed of the confirmed interview and reduces scheduling errors.

NFR-001	Non-Functional — Performance	The system shall generate the formatted PDF production sheet in under 1 second after the host requests it.	High	Pass: At least 95% of production-sheet generation requests complete within 1 second during performance testing. Fail: More than 5% of requests take longer than 1 second under the specified test load.	Ensures the outline-generation feature responds quickly during podcast preparation.
NFR-002	Non-Functional — Security	The system shall restrict access to episode schedules and guest-submitted information to authorized users.	High	Pass: An authenticated guest can access only their own information and an authenticated host can access only episodes they manage. Fail: An unauthorized user can access another guest's or host's episode information.	Protects guest information, episode details, and scheduling data from unauthorized access.

Requirement ID	Related Use Case	Verification / Evidence
FR-001	UC-01 – Submit Discussion Outline; UC-02 – Book Interview Slot	Verify that the guest can select an available interview slot and submit discussion topics and biography links.
FR-002	UC-03 – Manage Interview Availability	Verify that the host can create, modify, and block interview time slots.
FR-003	UC-04 – Review Guest Submission	Verify that the host can view the submitted discussion topics and biography links for a scheduled episode.
FR-004	UC-05 – Generate Run-of-Show	Verify that the system generates a formatted, timestamped production sheet containing the episode schedule and submitted guest topics.
FR-005	UC-06 – Send Booking Confirmation	Verify that a booking confirmation and calendar invitation are generated after a successful booking.
NFR-001	UC-05 – Generate Run-of-Show	Performance testing to verify that the formatted PDF production sheet is generated within the specified 1-second target.
NFR-002	Protected episode-related use cases	Security testing to verify that only authorized users can access episode schedules and guest-submitted information.
