

SOFTWARE REQUIREMENTS SPECIFICATION

Podcast Guest Scheduling & Outline Builder

Name: Advika Raj **SRN:** PES1UG24CS906

Document Purpose

This Software Requirements Specification (SRS) organizes the requirements for the Podcast Guest Scheduling & Outline Builder project. The system is a media production organizer that allows podcast hosts to share booking availability, collect guest talking point outlines, and generate timestamped run-of-show episode production notes.

1. Scope

The system covers interview-slot management, guest booking and submission of discussion topics and biography links, host review of submitted information, generation of a timestamped production sheet, and booking confirmation/calendar notification. The requirements below are limited to the functionality defined for Software Engineering Lab 1.

2. Stakeholders and Actors

Actor	Role
Podcast Guest	Selects an available interview slot and submits discussion topics and biography links.
Show Host	Creates, modifies, and blocks interview slots; reviews guest submissions; prepares the episode.
Calendar/Notification Service	Supports booking confirmation and calendar invitation delivery.

3. Functional Requirements

ID	Requirement	Priority
FR-001	The system shall allow guests to select an available interview time slot and submit structured bullet points for discussion topics with biography links.	High
FR-002	The system shall allow the show host to create, modify, and block interview time slots.	High
FR-003	The system shall allow the show host to view submitted discussion topics and biography links for a scheduled episode.	High
FR-004	The system shall generate a formatted, timestamped run-of-show production sheet using the episode schedule and submitted guest topics.	High
FR-005	The system shall send a booking confirmation and calendar invitation to the guest after an interview slot is successfully booked.	High

4. Non-Functional Requirements

ID	Type	Requirement	Priority
NFR-001	Performance	The system shall generate the formatted PDF production sheet in under 1 second after the host requests it.	High
NFR-002	Security	The system shall restrict access to episode schedules and guest-submitted information to authorized users.	High

5. Core Use Case Summary

UC-02 — Book Interview Slot

Primary Actor: Podcast Guest. Supporting Actor: Calendar/Notification Service. The guest opens the booking page, views available slots, selects a slot, confirms the booking, and receives a booking confirmation and calendar invitation. The selected slot becomes unavailable to other guests. If the selected slot is no longer available, the

system informs the guest and displays the currently available slots again.

6. Functional Flow Summary

Activity	Expected Result
Manage interview availability	Host creates, modifies, or blocks slots; updated availability is reflected to guests.
Book interview slot	Guest selects an available slot and confirms the booking.
Submit guest information	Discussion topics and biography links are associated with the scheduled episode.
Review guest submission	Host can access the submitted topics and biography links for preparation.
Generate run-of-show	A formatted, timestamped production sheet is generated from schedule and guest topics.
Send booking confirmation	Guest receives confirmation and calendar invitation with the correct interview date and time.

7. Acceptance and Quality Conditions

- Booking must not permit selection of an unavailable or blocked slot.
- Submitted guest information must be saved and accessible to the authorized host.
- The production sheet must contain the episode schedule, timestamps, and submitted discussion topics.
- Successful booking must produce a confirmation and calendar invitation containing the correct date and time.
- During performance testing, at least 95% of production-sheet generation requests should complete within 1 second under the specified test load.
- Authenticated guests should access only their own information, while authenticated hosts should access only episodes they manage.

8. Assumptions and Constraints

- The show host provides at least one available interview slot before a guest attempts booking.
- A booking slot cannot be simultaneously booked or blocked.
- The calendar/notification service is available when a successful booking confirmation is sent.
- The SRS is limited to the requirements and actors defined for the lab problem statement; implementation technologies are not prescribed.
